Bar Code Scanner
Installation Instructions

Contents

Attach interface cable
Connect the interface cable to the scanner as instructed in the DS6707 Quick Start Guide provided.

Figure 1 Attach Interface Cable

Connect adapter and cable to mini-dock
1 Connect the adapter (U) to the RS-232 port on the mini-dock.
   The nuts on the adapter face away from the mini-dock.
2 Connect the interface cable (V) to the adapter, securing the connector by turning its thumb screws.
**Connect power supply (MDSe)**

1. Remove the back panel of the MDSe.
2. Connect the AC power cord (I) to the power supply (W) and to the power strip inside the MDSe.
3. Remove the backing from one side of the adhesive pad, and affix the pad to the power supply, on the side without the label.
4. Remove the other backing from the adhesive pad, and affix the power supply to the shelf at an angle, taking care not to cover the warning labels. See Figure 2. Positioning the power supply at an angle allows you to unplug the AC power cord later, if necessary.
5. With the power supply cable extending out the upper right-hand notch, slide the back panel up and in.

**Connect power supply (MDS Lite)**

1. Make sure that the shelf on the MDS Lite is no more than 11” from the base. Lower or raise it as necessary. See Figure 3.
2. Connect the AC power cord (I) to the power supply (W) and to the power strip on the MDS Lite column.
3. Remove the backing from one side of the adhesive pad, and affix the pad to the power supply, on the side without the label.
4. Remove the other backing from the adhesive pad, and then affix the power supply to the rear of the shelf. See Figure 4.
Insert grommets
1. If grommets are in the side of the column, temporarily remove them.
2. Insert the power supply cable into the side of the column, from the shelf up to the platform.
3. Insert grommets to secure the power supply cable in the column.

Connect power supply to scanner
1. Connect the power supply cable (W) to the back of the interface cable connector. See Figure 6.
2. Secure the excess cable using the velcro strips.

Set up system and program scanner
1. Press the Setup key on the ultrasound system.
2. Select Connectivity.
3. In the Serial Port list, select Bar Code Scanner.
4. Click Yes to restart the system.
   Restarting activates Bar Code Scanner connectivity.
5. Using the bar code scanner, scan the Carriage Return/Line Feed bar code.
   A copy of the Carriage Return/Line Feed bar code is in DS6707 Quick Start Guide.
6. Scan additional programming bar codes as desired.
   You can program the scanner with various user preferences, such as beeper volume. Refer to DS6707 Quick Start Guide. For more comprehensive information, refer to DS6707 Digital Scanner Product Reference Guide, available on Symbol’s Web site at www.symbol.com.
   Note: Because the bar code scanner, DVD recorder, and VCR require the same port on the mini-dock, you can connect only one of these peripherals at a time.
