Endocrinology

This guide provides coverage and payment information for diagnostic ultrasound and ultrasound guided procedures commonly performed by endocrinologists. SonoSite provides this information as a courtesy to assist providers in determining appropriate codes and other information for reimbursement purposes. It is the provider’s responsibility to determine and submit appropriate codes, modifiers and claims for services rendered. SonoSite makes no guarantees concerning reimbursement or coverage. Please feel free to contact the SonoSite reimbursement staff if you have any questions at 1-888-482-9449.

Documentation Requirements
All diagnostic ultrasound examinations, including those when ultrasound is used to guide a procedure, require that permanently recorded images be maintained in the patient record. The images can be kept in the patient record or some other archive - they do not need to be submitted with the claim. Images can be stored as printed images, on a tape or electronic medium. Documentation of the study must be available to the insurer upon request.

A written report of all ultrasound studies should be maintained in the patient's record. In the case of ultrasound guidance, the written report may be filed as a separate item in the patient 's record or it may be included within the report of the procedure for which the guidance is utilized.

Third Party Insurance Payment Policies
The "Original Medicare Plan" also referred to as traditional Medicare Part B, will reimburse endocrinologists for medically necessary diagnostic ultrasound services, provided the services are within the scope of the physician's license. Some Medicare Contractors require that the physician who performs and/or interprets some types of ultrasound examinations be capable of demonstrating relevant, documented training through recent residency training or post-graduate CME and experience. Contact your Medicare Part B Contractor for details. Also we recommend checking for any local coverage determinations for the service(s) you intend to provide.

Payment policies for beneficiaries enrolled in Medicare Part C, known as the Medicare Advantage plans, will reflect those of the private insurance administrator. The Medicare Advantage plan may be either a Health Maintenance Organization (HMO) or a Preferred Provider Organization (PPO).

Private insurance payment rules vary by payer and plan with respect to which specialties may perform and receive reimbursement for ultrasound services. Some payers will reimburse providers of any specialty for ultrasound services while others may restrict imaging procedures to specific specialties or providers possessing specific certifications or accreditations. Some insurers require physicians to submit applications requesting ultrasound be added to their list of services performed in their practice.

Contact your private payers before submitting claims to determine their requirements and request that they add ultrasound to your list of services.

Use of Modifiers
In the office setting, a physician who owns the equipment and performs the service him or herself or through an employed or contracted sonographer, may bill the global fee, which is represented by the CPT™ code without any modifiers.

If the site of service is the hospital, the -26 modifier, indicating the professional service only was provided, must be added by the physician to the CPT code for the ultrasound service. Payers will not reimburse physicians for the technical component in the hospital setting.

If billing for a biopsy or injection procedure on the same day as an office visit, add modifier -25 to the office visit code to indicate a "significant, separately identifiable evaluation and management service." However, this modifier is not to be used routinely. The E&M service must be "...above and beyond the usual preoperative and postoperative care associated with the procedure that was performed" (CPT Assistant, May 2003.) Be sure to document in the patient's record all components of the E&M service.

Code Selection
Ultrasound services performed with hand-carried ultrasound systems are reported using the same ultrasound codes that are submitted for studies performed with cart-based ultrasound systems so long as the usual requirements are met. All ultrasound examinations must meet the requirements of medical necessity as set forth by the payer, must meet the requirements of completeness for the code that is chosen, and must be documented in the patient's record, regardless of the type of ultrasound equipment that is used.

It is the physician's responsibility to select the codes that accurately describe the service performed and the corresponding reason for the study. Under the Medicare program, the physician should select the diagnosis or ICD-9 code based upon the test results, with two exceptions. If the test does not yield a diagnosis or was normal, the physician should use the pre-service signs, symptoms and conditions that prompted the study. If the test is a screening examination ordered in the absence of any signs or symptoms of illness or injury, the physician should select "screening" as the primary reason for the service and record the test results, if any, as additional diagnoses.
The following specific coding advice is suggested by SonoSite's reimbursement staff. (Complete descriptors for codes referenced in the following paragraphs are listed in the attached chart.)

- For characterization or identification of a thyroid nodule use CPT code 76536 - Ultrasound of soft tissues of head and neck.
- For percutaneous needle core biopsy of the thyroid, use code 60100. Image-guided, line needle aspirations may be billed using code 10022.
- For ultrasound guidance of a thyroid biopsy or cyst aspiration use CPT code 76942 - Ultrasonic guidance of needle placement. Report 76942 in addition to the code for the underlying procedure (e.g., 60100, 10022.)

Please review the National Correct Coding Initiative which also provides the following on multiple procedures:

- "CPT codes 76942, 77002, 77003, 77012, and 77021 describe radiologic guidance for needle placement by different modalities. CMS payment policy allows one unit of service for any of these codes at a single patient encounter regardless of the number of needle placements performed. The unit of service for these codes is the patient encounter, not number of lesions, number of aspirations, number of biopsies, number of injections, or number of localizations."

In addition per NCCI:

- "Ultrasound guidance and diagnostic ultrasound (echography) procedures may be reported separately only if each service is distinct and separate. If a diagnostic ultrasound study identifies a previously unknown abnormality that requires a therapeutic procedure with ultrasound guidance at the same patient encounter, both the diagnostic ultrasound and ultrasound guidance procedure codes may be reported separately. However, a previously unknown abnormality identified during ultrasound guidance for a procedure should not be reported separately as a diagnostic ultrasound procedure."
Payment Information

The following chart provides payment information that is based on the national unadjusted Medicare physician fee schedule for the ultrasound services discussed in this guide. Payment will vary by geographic region. Use the “Professional Payment” column to estimate reimbursement to the physician for services provided in facility settings.

Ambulatory Payment Classification (APC) codes and payments are used by Medicare to reimburse facilities under the Hospital Outpatient Prospective Payment System (OPPS). Payment is based on the national unadjusted OPPS amounts for facilities. The actual payment will vary by location.
