Quick Reference Guide
SonoSite iViz Ultrasound System

Overview
This Quick Reference Guide is for reference and refresh only and is not intended as a substitute for the user guide that came with your SonoSite iViz system. For detailed procedures, descriptions, features, and safety precautions, see the SonoSite iViz User Guide, available at www.sonosite.com.

Front of the iViz system

- Power status LED
- Power on/off
- Microphone
- Volume up
- Volume down
- Transducer socket
- Audio out
- Micro USB port
- Front camera

Touchscreen while in Scan mode

- Freezes an image
- Captures an image or clip
- Shows number of saved images and clips
- Shows power management
- Shows scan area
- Displays Android controls
- Displays patient information
- Displays time, date, and percent charged
- Lets you select exam type
- End study and returns you to the patient record
- Slides through the options on the control wheel
- Changes Scan mode (press and hold)
- Displays patient information
- Shows number of saved images and clips
- Displays time, date, and percent charged

### Before scanning

#### Installing the battery

1. On the back of the system, position the battery in the battery slot so that the beveled edge of the battery is nearest the side of the SonoSite iViz system.

2. Press the battery firmly into the back of the system until it locks in place.

#### Checking the battery bay charger

<table>
<thead>
<tr>
<th>LED Behavior</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blinking green</td>
<td>Battery is charging.</td>
</tr>
<tr>
<td>Green</td>
<td>Battery is fully charged.</td>
</tr>
<tr>
<td>Amber/light red</td>
<td>Battery is very low.</td>
</tr>
<tr>
<td>Red</td>
<td>Bad battery pack; recycle the battery.</td>
</tr>
</tbody>
</table>

#### Connecting transducers

- Insert the transducer connector into the bottom of the system, with the transducer cable facing away from the other connectors.

### Using gestures

- **Swipe**
  
  Move your finger quickly across the screen.

- **Drag**
  
  Move one or two fingers across the screen, usually to move an object from one location to another.

- **Tap**
  
  Quickly touch the screen once.

- **Press and hold**
  
  Touch your finger to the screen, and hold it there for about two seconds.

- **Pinch or zoom**
  
  Slide two fingers together or apart on the screen.

### Turning on the system

1. Check that a battery is installed.
2. Press the **Power** button, and wait several seconds for the system to power on.
3. Swipe up on the **Lock** icon.

### Choosing an exam type

1. When scanning, tap the **Exam Type** drop-down menu in the upper right of the screen. A list of available exam types appears.
2. Tap the exam type you want to change to.
Scanning

Imaging modes

To switch from 2D to M Mode, press and hold 2D; press and hold M to return to 2D.

- **2D** (default) – This mode displays echoes in two dimensions by assigning a brightness level based on the echo signal amplitude.
- **M Mode** (Motion Mode) – This mode provides a trace of the image displayed over time. A single beam of ultrasound is transmitted, and reflected signals are displayed as dots of varying intensities, which create lines across the screen.
- **Color** – This mode is used to visualize the presence, velocity, and direction of blood flow in a wide range of flow states. To go to Color mode, tap Color on the wheel while in 2D.

Performing a basic scan

In SonoSite iViz, the active imaging mode is always highlighted in blue so you can tell what imaging mode you are using. For example, in Color mode, both the 2D and Color buttons are highlighted in blue.

Adjusting gain and depth

- To adjust gain, on the control wheel, tap Overall Gain or Near/Far Gain, and move the blue dot up and down the slider.
- To adjust depth, on the control wheel, tap Depth, and use the plus/minus buttons to increase/decrease scan depth (or tap one of the dots for specific screen-depth index).

Freezing and scrolling frames (cine)

1. While scanning, tap FREEZE.
2. View frames by dragging the green slider up and down to scroll through the frames, or select the back arrow to return to the first frame or the forward arrow to go to the last frame.

Adding labels

1. Do one of the following:
   a. On a frozen image, tap Text Labels.
   b. On a saved image, open the bottom tool drawer by swiping upward on the tool drawer handle in the lower right of the screen, then tap Text Labels.
2. To add an arrow:
   a. Tap +Arrow.
   b. Using your finger, drag the arrow to a location on the screen.
   c. Using your finger, drag the blue orientation arrows to rotate the center black arrow.
3. To add a standard label:
   a. Tap the label you want to add, such as Right or Medial.
   b. Using your finger, drag the label to a location on the screen.
4. To add a custom label to this image:
   a. Tap the text box at the top of the list of labels.
   b. Type the text of the label, and then tap Done.
   c. Using your finger, drag the label to a location on the screen.

Refer to the iViz User Guide for more information about creating and saving Custom Labels.
**Scanning**

**Sharing a study**

1. From the Patient module, tap the **iViz Studies** tab.
2. Tap **Study**. This exports the reports, images and clips within a study.
3. Tap **Next**. Depending on the option you choose, complete the remaining information on the right side of the screen (for example, the local PACS server).
4. Tap **Share**.

**Creating or updating a patient study**

1. To open the Patient module:
   - From the Home screen tap **Patient**.
   - During an exam, tap the **Patient** field at the top of the screen.
2. Do one of the following:
   - To update a patient study, locate and open the study you want to change.
   - In an open patient study, in the Patient module, tap **New Study**.
3. Enter or change the patient information.
4. Tap **Save**.

**Measuring**

**Measuring distance**

1. On a frozen scan, tap **Measurements**.
2. Under the **General** measurements area, tap **Distance**.
3. Drag the active caliper to the first point, then drag the other caliper to the second point.
4. As needed, tap and drag each caliper until it is precisely positioned.

**Measuring an ellipse**

1. On a frozen scan, tap **Measurements**.
2. Under the **General** measurements area, tap **Ellipse**.
3. Drag the caliper to the boundary of the feature you want to measure. When you lift your finger, a dashed circle appears, and the ellipse is anchored at that point.
4. Drag the second caliper along the horizontal axis to align it to the rest of the feature you are measuring.
5. Tap the height caliper to make it active.
6. Drag the height caliper to the height of the feature you want to measure. The diameter, area, and circumference measurements appear in the **Measurements** box.
Measuring

Measuring a shape
1. On a frozen scan, tap **Measurements**.
2. Under the **General** measurements area, tap **Trace**. An active caliper appears on the screen.
3. Drag the caliper to the start point of your measurement, and lift your finger.
4. Drag the caliper to outline the feature you want to measure. A dotted line shows the path of the trace.
5. Before you lift your finger, make sure the ends of the trace are close together; that way, the trace automatically closes. The area and circumference measurements appear in the **Measurements** box.

Measuring heart rate
1. From the **Exam Type** drop-down menu, tap **Cardiac**.
2. On a frozen M-Mode trace, tap **Measurements**.
3. Switch to the **Cardiac** calculation list.
4. Under **HR**, tap **HR** in the calculations list.
5. Position the caliper at the peak of a heartbeat, and lift your finger from the screen. A second caliper appears.
6. Position the second caliper at the peak of the next heartbeat, and lift your finger from the screen. The heart rate appears.
